NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tem.cdu/docs/Genbank draft data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 65 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                         A (Day, K.C. Direct Submission Submitted (13-UUL-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Jul 12, 2002 this sequence version replaced gi:20303171.

The present sequence encodes a murine de novo DNA cytosine methyltransferase designated Dnmt3s. The polypeptides can be administered therapeutically, especially by expressing encoding polymucleotides, to treat diseases associated with DNA cytosine methyltransferase, such as neoplastic disorders e.g. carcinomas, sarcomas and leukemias. They can be used to disgnose, or determine susceptibility to neoplastic disorders, by assaying for polypeptide expression levels in mammalian cells/body fluids. They are useful to soren for compounds inhibiting/activating the polypeptide. The polypeptide can also be used for in vitro de novo requiate DNA. Such in vitro methylation may be used to direct or regulate DNA expression in biological systems, e.g. recombinant DNA methylated in vitro may be introduced into a cell/organism to increase or decrease expression of a desired polypeptide for which the native DNA is under-methylated or nor methylated. The polypeptides can also be used to produce antibodies which are useful to detect and purify the polypeptide or therapeutically e.g. to treat neoplastic disorders. The polynucleotides are useful to produce probes and primers which are New mouse and human polypeptides, useful to treat and diagnose neoplastic disorders e.g. carcinomas, sarcomas and leukemias Claim 8; Fig 1A; 114pp; English Okano M, Xie WPI; 2000-106298/09. fluids. They are useful to screen for compounds inhibiting/activating the polypeptide. The polypeptides can also be used for in vitro de novo methylation of DNA. Such in vitro methylation may be used to direct or regulate DNA expression in biological systems, e.g. recombinant DNA methylated in vitro may be introduced into a cell/organism to increase or decrease expression of a desired polypeptide for which the native DNA is under-methylated or not methylated. The polypeptides can also be used to produce antibodies which are useful to detect and purify the polymocleotides are useful to produce probes and sischers. The useful diagnostically.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    239

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions useful for preventing, treating or ameliorating redical conditions useful for preventing, the genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic ansemia, autoimmune thyroiditis, diabetes mellitus, crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial isohamias;
                                                                                                                                               (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal

The present sequence encodes a murine de novo DNA cytosine methyltransferase designated Dmmt3b. The Dmmt3b gene also produces, through alternate splicing, at least two shorter isoforms of 840 and through alternate splicing, at least two shorter isoforms of 840 and 77 amino acid residues, termed Dmmt3b2 and Dmmt3b3 (sequences or through alternate splicing, expecification). The polypoptides can be administered to the appearizally, especification). The polypoptides can be administered the respectively, especification). The polypoptides can early laransferase, such as neoplastic disorders, or determine susceptibility to neoplastic disorders, by assaying for polypoptide expression levels in mammalian cells/body [10] polypoptide. The polypoptide expression levels in mammalian cells/body connethylation of DNA. Such in vitro mathylation may be used for in vitro de novo methylation of DNA. Such in vitro methylation may be used to direct or regulate DNA expression in biological systems, e.g. recombinant DNA methylated in vitro may be introduced into a cell/organism to increase or decrease expression of a desired polypoptide can also be used to produce antibodies which are useful to detect and purify the polypoptide or therapeutically e.g. to treat neoplastic disorders. The polypoptide are useful to produce probes and primers which are useful diagnostically.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1351 -CTGTTTCCAGCTTGCCATGACAGTGAAAGTGACAG----TGGCAAGGCTGTGGAAG 1405

contributions designated DNMT3B1. The DNMT3B gene also produces, through alternate splicing, at least two shorter isoforms termed DNMT3B2 (comprising amino acids 1-355 and 376-853 of AAY54059, see AAY54059) and DNMT3B3 (comprising amino acids 1-355, 376-743 and 807-853 of AAY54059) and DNMT3B3 (comprising amino acids 1-355, 376-743 and 807-853 of AAY54059, see AAY54060) (sequences not given in the specification).

CAAY54059 and DNMT3B3 (comprising amino acids 1-355, 376-743 and 807-853 of AAY54059, see AAY54060) (sequences not given in the specification).

CAAY54059 and DNMT3B3 (comprising the polypecially by expressing encoding polymucleotides, to treat diseases associated with DNA cytosine methyltatransferase, such as neoplastic disorders e.g. carcinomas, sarcomas and leukemias. They can be used to disorders e.g. carcinomas, sarcomas and leukemias. They can be used to disorders in the compounds inhabiting/activating the polypeptide. The polypeptides can also be used for in vitro de nevo methylation of DNA.

Such in vitro methylation may be used to direct or regulate DNA.

Such in vitro methylation may be used for in vitro de nevo methylation of Corpora in biological systems, e.g. recombinant DNA methylated in vitro may be used to direct or regulate DNA.

Such in vitro methylated or not methylated. The polypeptides can also be used to produce antibodies which are useful to detect and purify the polypeptide corporate and primers which are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           'n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1060

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5
                         AB056306 to AB060787 represent isolated nucleic acids (I) differentially expressed in cancer tissues. ABB78993 to ABB79004 represent proteins encoded by the AB060787 to AB060787 nucleic acid sequences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypeptide for detecting the presence or absence of a polymucleotide encoded by a for detecting the presence or absence of a polymucleotide encoded by a nucleic acid which hybridises to (I) in a cell. A probe/primer derived from (I) can be used for determining the presence of a nucleic acid which hybridises to (I), and for determining the presence of cells in a sample of cells from a patient. (I) is useful for determining the presence or state of other type of cancer, in antisense therapy, to generate macroarrays on a solid surface, to identify a chromosome on which the corresponding gene resides, and in tissue profiling, forensics, genetic analysis, mapping and diagnostic applications. (I) can be used to raise antibodies, and to screen for peptide analogues and antagonists.
                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid that is differentially expressed in tissues useful for determining the presence of colon cancer ir or tissue type, and in antisense therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2621

AAH32943 to AAH37195 and AAG73514 to AAG7778B represent human colon cancer associated nucleic acid molecules (N) and proceedins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene cancer antigens have cytostatic activity and can be used in the prevention. Color cancer antigens have cytostatic activity and can be used in the prevention, changes associated with inappropriate P prevention. N and P may be used in the prevention.

CC diagnosis and treatment of diseases associated with inappropriate P color cancer associated with decreased expression by exectifying mutations or deletions are proteins or to supplement the patients own production of P color cancer associated Ps.

CC Additionally, N may be used to produce the colon cancer-associated Ps.

CC Additionally, N may be used to produce the colon cancer-associated Ps.

CC Additionally, N and be cards into a host cell and culturing the color cancer associated Ps.

CC Additionally, N and cards into a best cell and culturing the color cancer associated Ps.

CC Additionally, N and processor actis into a best cell and culturing the color cancer associated Ps.

CC Additionally, N and processor actis into a best cell and culturing the color cancer associated Ps.

CC Additionally, N and page 7003 of the sequence listing were concerned by the color cancer associated Ps.

CC Missing at time of publication, meaning no sequences are present for concerned processor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2390 GCCTCTTTGAGTTCTACCGCCTCCTGCATGCCGCCCCAAGGAGGAGATGATC 2449

Claim 8 SEQ ü 11099; 2537pp + G ROM; English

sequence and an oligonucleotide comprising a sequence complementary to a conjunct point of the sequence, where the oligonucleotide comprises a 3'-end sequence, where the coligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs as and any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH12742 represent human cDNA sequences; AAB92446 to AAH13633 to AAH13642 represent human cDNA sequences; AAB92446 to AAH13630 represent oligonucleotides, all of which are used in the exemplification of the present invention. The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end oligonucleotide comprises at least 15 nucleotides; or (b) a combination the 5602 nucleotide sequences defined in the specification, where the

```

1

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromomomers.

and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or guarticating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating cities any polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in casponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic coding sequences of act and products dependent on DNA and classification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    o

The present invention relates to a composition comprising several polymucleotide probes. Probes can be derived from the present sequence. The probes are immobilised and are preferably useful as hybridisable array elements in a microarray for monitoring the expression of several polymucleotides. The microarray can be used in the disgnosis of cancers such as adenocarcinoma etc., immunopathology such as AIDS, Addison's and tetratocarcinoma etc., immunopathology such as AIDS, Addison's atherosclerosis and bronchitis etc., neuropathology such as AIDS, asthma, atherosclerosis and bronchitis etc., neuropathology such as AIDS, asthma, atherosclerosis and bronchitis etc., neuropathology such as AIDS, asthma, atherosclerosis and bronchitis etc., neuropathology such as AIDS in more and cerebral neoplasms etc. The microarray can also be used to investigate an individual's predisposition to a disease such as cancer, investigating cellular response to infection, drug treatment etc. The microarray can be used for disgnostics, prognostics and treatment etc. The expanse, drug discovery and development, toxicological and carray can elso be used for monitoring disease progression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Composition having probes which comprise part of gene sequence encoding proceins associated with cell proliferation useful as hybridizable array elements in Microarrays to monitor expression of target polymuclectide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2387 GCCGCCTCTTCTTTGAGTTCTACCGCCTCCTGCATGATGCGCGCCCCAAGGAGGAGATG 2446

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             á
A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 "GS" sequences given in AAT19001-T26837 and which is able to hybridise to part of human genomic DNA, CDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed CDNA libraries prepared from various human tissues; synthesis of CDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS
                                                                                                                                                                                                                                                                         Identifying gene signatures in 3'-directed human cDNA library -
for diagnosis of abnormal cell function, by preparing cDNA that
reflects relative abundance of corresp. mRNA in specific human

WPI; 2001-541565/60.

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -

Disclosure; SEQ ID NO 12586; 1701pp + Sequence Listing; English

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB1801) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)sqonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, lung, or uroganital, (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC The invention relates to isolated polynucleotide (I) and CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this pattent did not appear in the printed specification, but was obtained in electronic format directly from WIPO cat figure in the printed specification in the printed specification in the printed specification in the printed cat figure in the printed specification in the printed specification format directly from WIPO cat figure in the printed in electronic format directly from WIPO cat figure in the printed in electronic format directly from WIPO cat figure in the printed in electronic format directly from WIPO cat figure in the printed in the printed in the printed in the printed in the printed in the printed in the printed in the printed in the printed in the printed in the printed in the printed in the printed in the printed i
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative
                                                                                                                                                                                                                                                  disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia ann epilepsy; and (f) infectious diseases such as viral, bacterial, fungand parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directlifrom WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding 3224 human useful for preventing, diagnosing cancers and metastases -

Pred. No. is the number of results predicted by ch
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
